## SCREEN SYSTEM

The Modulink Concensus partition system is a strong, attractive, lightweight system providing a versatile and easy solution for workstations and office screening.

This system simply bolts together for strong permanent connection which allows for the addition of shelves and work tops.

Panels are fabric covered with stylish rounded aluminium cappings in attractive silver finish.

### POWER OPTION

The Concensus System also offers a power option with a twin channel extrusion fitted to either the bottom or the centre of the screen to provide power and data cable separation.

Twin removable lids are fitted to one side of the channel, allowing easy access for cabling. Power and data points can be fitted to both sides of the channel.

Two standard colours are available, ex stock, in Charade fabric. A full range of other colours and fabrics are also available.

Riviera

Mineral Red

- **Excellent flexibility**
- **Push pinnable**
- **Excellent screening for work stations or to hide unsightly areas**
